#### **Product description**

The TowerPro SG90 Micro Servo is a very affordable and versatile servo with a wide range of applications for serious hobbyists working in robotics and related fields.

#### Specifications:

Certifications: CE, RoHS Connector cable length: 25cm Connector type: JR Dead bandwidth: 1us Gear type: Polyoxymethylene Operating voltage: 4.8v Size: 23.0 x 12.2 x 29.0 mm Speed: 0.12s/60°

Temperature range: 0°C - 55°C

Torque: 1.8 kg/cm Weight: 9g

**Product information** 

Product Dimensions	3.6 x 2.5 x 0.5 inches
Item Weight	0.32 ounces
Shipping Weight	0.32 ounces
ASIN	B01608II3Q
Manufacturer recommended age	12 years and up

Nice little motors, for the price. Can be modded for continuous rotation.

January 8, 2017

Work well for the price. I'm currently using one to release the door on my DIY Toaster/Reflow soldering oven. I am modding the second one for continuous rotation, for a Nixie clock I am building, which will have mechanical Winchester Quarter chimes. If these were more expensive, I probably wouldn't have modded the second one for continuous rotation (so, they saved me money twice). The mod is straightforward: Disassemble the motor, making note of the gear arrangement (quick cellphone pic is handy). Connect up the motor and send a 90 degree command (center). Rotate the sensor shaft (tall, golden shaft) until the motor stops. Drop a few drips of CA glue, or thread locker into the potentiometer, to prevent it from rotating later. Drill out the gears that rotate the sensor shaft with a 1/16" drill bit, so that they turn freely on the shaft and won't break the glue free.

Once you've done that, you will find that the motor won't turn, right around a setting of 90. Mine stops at 89 and 90, rotates very slowly at 91 and just a bit faster at 88. When you send higher, or lower values, the motor will spin faster, in one direction or the other (fastest at zero and 180). NOTE: This "stopped" position may drift a bit, after a few minutes of 'warm-up', or after running the motor. I've found that, if I power up the unit, with a value of 90, it may make random 'clicks' as it isn't quite at a dead stop. If I send it a 91, it will

### Cheap servos, broke before use...

Never really had any problems from these TowerPro servos until now. Ordered two for my FT Versa wing and one is bad right out of the bag. Read more Published 7 months ago

Keith

Not great, but appropriately priced.

I am giving four stars because these are not "tight," which is to say that the output shaft will slide in/out about a millimeter. Read more
